

TONNAGE IN THE OHIO PROPERTY

Duncan MacVichie's Report Is Recalled in View of Reported Deal.

MINE WAS MARVEL AMONG THE COPPERS

And Still Has Tonnage That Keeps Its Standing at High Level.

A little over three years ago when Duncan MacVichie made his comprehensive report on the Ohio Copper property at Bingham, the copper industry lacked its Ray Consolidated, Chino, Miami, Nevada Consolidated and Inspiration copper propositions, the Ohio then standing as one of the marvels among the copper properties of the country. While its tonnage today does not extend to the high figures which the world has been educated to receive with the development of the porphyries, the mine still can stand with head unlowered and with all reason demand its due of attention from a discriminating world.

VOLUME OF TRADING IS BETTER ON FRIDAY

Although it was Friday the thirteenth, the business of the local exchange showed an improvement yesterday over the previous day, although conditions were not so quiet, and prices stood practically unaltered. A total of 44,994 shares of stock sold, the market value being \$3,335,818. In addition to the copper reports there were a number of other reports from the report termed possible ore, of an average of 1.58 per cent, the net value of which on a 12-cent copper market was \$192,309.92.

"If the ore bearing territory," says this report, "as developed on the 500-foot level is assumed to contain the tonnage of the Mascotte tunnel, an additional tonnage, herein given as possible ore, is found to be the amount of 4,109,747 tons, the average grade of the exposure on the 500-foot level being 1.16 per cent copper."

Since the presentation of this report the Mascotte tunnel level and the 200 also have been shown to contain the ore and with every indication of extending ever increasing depth, so local circles are of the opinion that 10,000,000 tons of ore certainly are assured in the mine at present, and with the probability that there is a still greater tonnage possible of measurement.

The report closed with the following paragraphs: "In conclusion, it is hardly necessary to emphasize the value of the property, and attention will merely be directed to the few of the striking features which will shortly cause the Ohio Copper company's mine to take rank with the leading producers of the world."

"First—The enormous tonnage developed in so short a time.

"Second—The persistence of and increase in value with depth of the state of the mine.

"Third—The magnificent concentrating qualities of the ore.

"Fourth—The possibility of extraordinary economies on mining, transportation and reduction.

"Fifth—The large proportion of territory yet unexplored."

Those knowing the Ohio mine and mill bear testimony to the economies predicted by Mr. MacVichie, and they declare that the achievements of the company would have spoken eloquently and long ago of these things and of earnings had the company met with the financial backing that appears to be soon provided by the eastern interests.

ROUND-ABOUT COURSE IN SILVER SHIPMENTS

The Rio Plata Mining company has shipped this month 13,000 ounces of silver bullion from its mine in the state of Chihuahua, Mexico. On account of the insurrection, which has been active in that state, the company could not be shipped, as usual, to the city of Chihuahua, about 250 miles to the east. It had to be carried by pack mules westward to Alamos, the nearest railroad main line, thence by rail to Guaymas, and from Guaymas by water, southward on the Gulf of California to Mazatlán. Then there was a long railroad journey across the country northeast to Monterrey, where the refinery is located. The silver had to travel five or six times as far as would have been necessary if the rebels had not been making trouble in Chihuahua.

EXCURSIONS TO DENVER

January 13 and 14, Via Oregon Short Line and Union Pacific. Round trip \$22.50, tickets limited to January 21. City Ticket Office 155 Main street.

SAN JUAN SECTION ANCELT DEPTHS REVEAL SECRETS

Two Splendid Wells Brought in Within the Past Day or Two.

RICH ORE SHOWS IN VIRGIN GROUND

Company Now in Position to Mine Deep and Very Economically.

According to advices received on Friday by F. A. Clark, the well-known oil expert, who is extensively interested in the San Juan, Utah, oil field, two new wells have just been brought in, which will go a long way toward establishing the merits of this Utah field in the good opinion of the world. On the Aztec north side, which is located about two miles northwest of the Goodridge property, a new well, without being shot, is producing a flow of oil which reports say flows down the canyon in a stream five feet in depth, which comes the nearest to being a gusher of anything so far brought in from this field.

General Manager Ernest L. Godbe of the Consolidated Pioche Company

is back from the Pioche district, where he inspected the connections made a few days ago via the No. 1 shaft with the old Raymond and Ely workings. These connections were made by crosscutting on the twelfth Raymond and Ely mine level, the crosscut coming in under these old workings by eight feet. The exact location and condition of these former points of endeavor were more a matter of guesswork than positive knowledge, and Mr. Godbe is decidedly well pleased that connections were made successfully without more trouble.

There is a great deal of new timbering necessary in these old drifts and crosscuts, and a considerable amount of work has been done by time, all which remains to be caught up. At a point 170 feet west of these connections, the management encountered an extensive cave in the drift along the Yuba dike, and with it is a considerable amount of first-class ore, which looks promising of being shipped to the surface. The shaft, for instance, which is the famous old Black dike itself. This occurrence of rich ore at this point is of much importance.

It is at this point that the cave to what is termed the Black dike, which really provides the immediate objective point of all this shaft development. The dike will be searched for without delay, for practically all the hardest and most expensive work has been accomplished. The shaft, for instance, which is the famous old Black dike itself. This occurrence of rich ore at this point is of much importance.
